

Dear FCC,

I personally do support the petition to require VRS interoperability because I am frustrated with the different ways to call people on videophone. Hearing users do not experience any difficulty of interoperability while the users of VRS have to experience. Is that functionality equivalent? Of course not, this does not require any scientific thinking to figure a way to make it work and it requires only a common sense.

It is very important to make everyone equally accessible by setting up one system just like the telephone. Again, it requires a common sense to figure the truly functionality equivalent that we all do deserve like anyone else.

You are the ones who can make a difference in allowing us able to communicate at the level of functionality equivalent by requiring the VRS interoperability and one standardized system for every and all users of VRS.

Thank you for this opportunity to make my comment.
